

Instructions:

Choose the hole format you want and use the [ggg_drill_1590b_all.pdf](#) template file to drill the hole sizes as specified in the diagrams above.

For the jack holes: Choose which side you want the DC Jack and only drill the DC Jack hole on one side. There are optional input/output jack markings that are closer to the top of the enclosure. These optional markings are for drilling where plastic jacks will be used and the PCB needs to fit over the jacks as well. Note that most of the GGG PCBs will fit over the pots and not interfere with the lower jack placement.
