

## Other schematic symbols

### Crossing contact points

These vertical and horizontal lines should make contact to each other (somewhere), however, if they're in the same schematic, the first pic do NOT make a connecting point.

### Not contact points

These two do not make contact points in the cross, so the vertical and horizontal lines should have no contact to each other.

All these with the SAME mark (VREF, A, B, 1, 2, etc) should be connected together.
